

Process Modeller ProMod

Usage

Date: 2020-02-28

Version: 7.04

Authors

- Heinz A PREISIG_
- Arne Tobias ELVE : ModelFactory

Installation

ProMo has been split into a set of gits for practical reasons.

- ProMo-tasks -- all task, mostly editors constructed on PyQt4
- ProMo-packages-OntologyBuilder -- the expert's sandbox
- ProMo-packages-ModelBuilder -- the translator's and the model builder's sandbox
- ProMo-packages-TaskBuilder -- the part that builds applications, thus belongs to the model builder's sandbox
- ProMo-packages-Common -- utilities that are used by the various editors/tasks
- ProMo-Model_Repository -- as it says: the model repository

The ProMo software uses relative referencing of the different modules. It must currently be manually put into a corresponding directory tree as shown below. The directory names in bold face are compulsory.

...ProMo/**packages/Common**

...ProMo/**packages/OntologyBuilder**

...ProMo/**packages/ModelBuilder**

...ProMo/**packages/TaskBuilder**

...ProMo/**tasks**

...**Model_Repository**

Requirements

- Python3, PyQt4, jinja2, graphviz, PyPDF2
